Re:

### Notification of Ex Parte Presentation

Petition of the Association for Local Telecommunications Services for a Declaratory Ruling Establishing Conditions Necessary to Promote Deployment of Advanced Telecommunications Capability Under 706 of the Telecommunications Act of 1996 CC Docket No. 98-78

Petition of Bell Atlantic Corporation for Relief from Barriers to Deployment of Advanced Telecommunications Services CC Docket No. 98-11

Petition of Ameritech Corporation for Relief from Barriers to Deployment of Advanced Telecommunications Services CC Docket No. 98-32

Petition of U S West Corporation for Relief from Barriers to Deployment of Advanced Telecommunications Services C Docket No. 98-26

Petition of the Alliance for Public Technology Requesting Issuance of Notice of Inquiry and Notice of Proposed Rulemaking to Implement Section 706 of the 1996 Telecommunications Act CC Docket No. 98-15

### KELLEY DRYE & WARREN LLP

Magalie R. Salas, Secretary June 19, 1998 Page Two

Dear Ms. Salas:

On behalf of e.spire Communications, Inc. ("e.spire"), please take notice that on Thursday, June 18, 1998, Jack Reich of e.spire, Riley Murphy of e.spire, and Brad Mutschelknaus of Kelly Drye & Warren LLP, met with Chairman Kennard, Commissioner Furchtgott-Roth, Tom Power, Paul Misener and Kyle Dixon, to discuss e.spire's support for the above-captioned Petition of the Association for Local Telecommunications Services.

The discussion covered various items on the attached chart which was distributed at the meeting. Specifically, the conversation focused on the following points:

- (1) e.spire's difficulties in securing Section 251(c) interconnection with the RBOCs for frame relay services;
- e.spire's difficulties in securing adequate collocation with some RBOCs and the need for the Commission to tighten its collocation rules;
- (3) the need for the Commission to clarify and further define ILEC unbundling obligations with respect to xDSL loops, loop electronics and OSS;
- (4) pricing alternatives for loops with electronics and for making loops ready for electronics;
- (5) unbundling and interconnection options in a DLC environment; and
- (6) the proposal that ILECs be permitted to establish lightly regulated data affiliates.

The attached presentation materials were provided to each attendee of these meetings.

### KELLEY DRYE & WARREN LLP

Magalie R. Salas, Secretary June 19, 1998 Page Three

Because e.spire's ex parte presentation may effect the merits and outcome of each of the above-referenced dockets, pursuant to Section 1.1206(b)(1) of the Commission's rules, e.spire submits an original and two (2) copies of this ex parte notification for inclusion in the record of each of those proceedings.

Respectfully submitted,

Brad E. Mutschelknaus

cc: Chairman Kennard (w/o enclosure)

Commissioner Furchtgott-Roth (w/o enclosure)

Tom Power (w/o enclosure)
Paul Misener (w/o enclosure)
Kyle Dixon (w/o enclosure

# Ex Parte Presentation

Petition for Declaratory Ruling Regarding Section 706 Association for Local Telecommunications Services CC Docket No. 98-78

Jack Reich Chief Executive Officer and President Riley Murphy Executive Vice President and General Counsel

Brad Mutschelknaus Kelley Drye & Warren LLP

June 18, 1998

# e.spire Communications, Inc.

- voice and data communications services in mid-sized metropolitan markets Formerly known as ACSL e.spire is a CLEC that provides integrated local in the southern and southwestern United States.
- e spire's business strategy is based on supplying customers with advanced telecommunications services through its digital SONET-based fiber optic local networks.
- c.spire has completed construction of local fiber networks in 32 markets and has 18 local exchange switches in operation.
- experience and more than 50 combined years of experience in the CLEC c.spire's senior management team is among the most experienced in the CLEC industry, with over 250 collective years of telecommunications
- e.spire has entered into State commission approved interconnection agreements with BellSouth. Southwestern Bell. Bell Atlantic. Sprint/Central. U.S West and GTE.

### Telecommunications Capabilities to e.spire Is Bringing Advanced Consumers Today

- e.spire has installed 45 of the more than 331 data switches that CLECs have deployed to date.
- Provided that adequate collocation arrangements can be made, e.spire and 'new-generation CLECs" will bring xDSL and other advanced technologies to millions of Americans.
- Over 41 percent of the nation's BTAs currently are covered by CLEC data Amarillo, Greenville, Montgomery, Baton Rouge, El Paso, Lexington and Little Rock. Customers in these "on net" locations have ready access to advanced telecommunications capabilities *roday*, through the efforts of facilities, including many smaller markets served by expire, such as e.spire and other CLECs -- not the ILEC monopolies.
- Responding to competitive pressure from CLECs, ILECs have announced massive investments in digital and broadband networks. In short, there currently is neither a crisis nor any deficiency in the deployment of advanced telecommunications capability in the United States.

# Section 706 Requires Full Implementation of Unbundling and Resale Obligations ILEC Interconnection, Collocation,

- The unavailability of data interconnection, collocation, unbundling and resale under the 1996. Act is the largest impediment to accelerating the deployment of advanced telecommunications capabilities.
- facilities and services. Some ILECs already are refusing to provide interconnection to, collocation with and unbundling of ILEC data c.spire has experienced tremendous difficulties in seeking Section 251 interconnection to frame relay networks.
- interconnection, collocation, unbundling and resale. ILEC data networks The Commission should clarify that Section 251(c) applies to data must be available for cost-based interconnection and unbundling.
- ILEC's must provide unbundled access to xDSL functionality. CLEC's also must have access to preordering functions that identify  $\mathrm{xDSL} ext{-}$ capable loops.

# Inbundling Requirements Extend to Digital The Commission Should Clarify That Its Loops and Subloop Electronics

- The Commission should clarify that ILECs must make the following categories of loops available on an unbundled basis:
- 2-wire analog
- 4-wire analog
- 2-wire digital
- 4-wire digital
- Loops provided with electronics and at cost-based rates that reflect the cost of such electronics, including:
- ILEC digital loop carriers (universal, integrated) next generation)
- multiplexers
- optical line terminating multiplexers and other opticalelectrical converters
- ADSL equipment, including remote DSLAMs, DSL line cards used in ISDN or DLC equipment, etc.
- Subloop electronics, including DSL, DLC, ISDN, MUX and OLTM. must be made available on an unbundled basis at cost-based rates.

### Collocation Rules To Ensure Reasonable and Nondiscriminatory Access to ILEC The Commission Must Establish New Data Facilities

- The Commission must establish new rules that:
- CLECs to avoid the cost of constructing enclosures for their collocation space, and allows them to collocate in - Provide for "cageless" physical collocation that allows a total area of less than 10 square feet.
- Provide for enclosed collocation cages of as little as 10 square feet.
- Allow multiple CLECs to share a single collocation cage.
- Allow collocated CLECs to establish cross-connects to cages of other collocated CLECs.
- remote switching modules, xDSL electronics, internet Eliminate restrictions on CLECs' ability to collocate routers and other advanced data equipment.

# The Commission Must Establish New Collocation Rules

### - continued -

- Require ILECs: virtual and physical collocation rates and charges to reflect the costing principles of Sections 251-
- allocation of space preparation charges among collocated Establish reasonable and nondiscriminatory rules for the
- intervals for new collocation arrangements, and expansion Establish reasonable and nondiscriminatory deployment of existing arrangements.
- Commission's collocation rules the most innovative and effective collocation provisions established by the State As an ongoing practice, incorporate into the commissions.

# Virtual Collocation Must Be Available as a Means of Connecting UNEs

- means of connecting UNEs, claiming it violates 8th Circuit's Currently. ILECs are restricting virtual collocation as a Iowa Utilities Board decision.
- Virtual collocation must be made available at all points of other points of aggregation where DLCs. MUXs. OLTMs environmental vault or its above-ground equivalent, and aggregation along the loop including the controlled and DSLs are deployed.
- CLECs must be able to identify the type of equipment installed at various points of aggregation.
- CLECs must be able to cross-connect aggregating equipment Line cards must be installed in aggregating equipment and to distribution or feeder plant.

# Separate ILEC Data Subsidiaries Represent An Untenable Solution to a Problem That Simply Does Not Exist

- They have done this and will continue to do this without any promise of deregulation under Section 706 Rather, they are beginning to respond telecommunications networks and technologies on almost a daily basis. ILECs are announcing tremendous investments in advanced to competitive pressures from CLECs.
- The Communications Act is technology neutral. The Commission should avoid any regulatory structure that would differentiate a service based on the technology used.
- carriers, including the ILECs, are deploying the same digital equipment The vast majority of interoffice transmissions are made over highcapacity digital facilities and "separate" data networks exist. All for voice and data services. It is impossible to create a workable regulatory policy based on technologies that are intertwined. interchangeable and difficult to distinguish.
- separate subsidiaries so that they can avoid the unbundling, resale and cost-based pricing obligations of Section 251(c) impermissibly would Permitting ILECs to place advanced telecommunications facilities in undermine and rewrite the 1996 Act.

# Freeing ILEC Data Subsidiaries from Section 251(c) Obligations Will Undermine the Act

- continued -

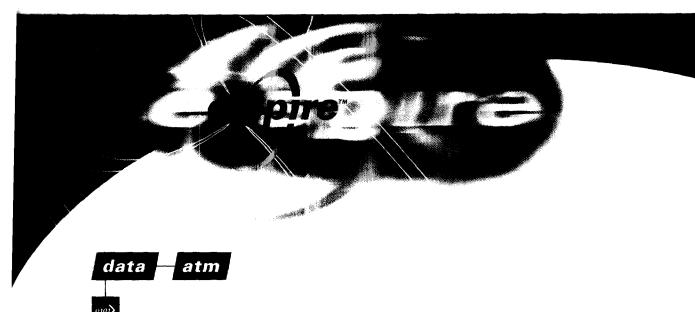

- Frunk-side separation is unworkable. It would give ILECs outside the central office -- whether or not such placement bizarre incentives to place equipment in discrete locations made technical or economic sense.
- The 1996 Act was intended to be forward-looking. Congress lid not intend to allow ILECs to create new bottlenecks over advanced technologies by the simple device of transferring advanced capabilities to a separate subsidiary.

## The Commission Shorld Preserve and Enhance Procompetitive Rules and Policies Adopted by State Commissions

- Section 706 jointly assigns jurisdiction to the FCC and State commissions.
- The Commission must not unilaterally take action under Section 706 that will disrupt State regulatory initiatives established under the Act, or other sources of authority.
- State-specific rules governing the combination of UNEs are critical to deployment of CLEC data services.
- State decisions requiring sub-loop unbundling facilitate the expansion of xDSL services.
- ILEC commitments to provide digital unbundled loops must be preserved.
- State actions regarding performance measurements and reporting standards should be sustained.

communications to the point"

e.spire ATM

The *e.spire* ATM serves sile. spire's premise to be serve With this service, *e.spire* provides an idea of the open communications appearance.

level of service, available from over 40+ POPs nationwide.
Into the users with high-bandwidth, delay-sensitive data

With *e.spire* ATM, the streamance needs somplex, media-rich applications such as CAD/CAM, remote super-computing, the collaboration and voice calls are easily met. Our service is also ideal for higher-volume. Sers of bursty' applications such as PC-to-server and file transfer. And, with *e.spire* ATM, we guarantee you transmission rate of susers are not left waiting during peak network activity.

### Service Levels

**e.spire** ATM service levels let you subscribe to exactly the guaranteed level of service that you need to meet specific performance rieeds. And, with **e.spire** ATM, your service levels are incrementally scalable to accommodate the changing demands of your network throughput requirements.

We've engineered our service levels in terms of Port Speed, to accommodate peak loads, and Sustained Cell Rate (SCR), to address normal activity. In the chart below, Port Speed identifies the speed of your connection to the ACSI network, and the maximum speed at which the traffic may be "burst" through the **e.spire** data network. **e.spire** is the guaranteed transmission rate — the speed at which you are able to transmit data, at any given moment. As a subscriber, transmission at the SCR is always ensured, and depending upon network capacity at the time of transmission, your data may be transmitted at a higher speed, up to the level of the port speed associated with your guaranteed SCR, without any additional charges.

The *e.spire* ATM service is offered at incremental Variable-Bit-Rate (VBR) and Constant-Bit-Rate (CBR) port speeds and Sustained Cell Rates (SCR) per Permanent Virtual Circuit (PVC), including:

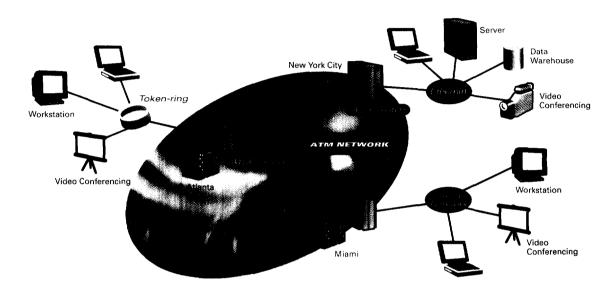

### e.spire Variable-Bit-Rate (VBR) ATM Service Levels

Port Speeds	SCR per PVC	
2 Mbps	.5 Mbps	
4 Mbps	1 Mbps	
6 Mbps	1.5 Mbps	
8 Mbps	2 Mbps	
10 Mbps	2.5 Mbps	
15 Mbps	4 Mbps	
20 Mbps	5 Mbps	
30 Mbps	8 Mbps	
45 Mbps	12 Mbps	

### e.spire Constant-Bit-Rate (CBR) ATM Service Levels

**e.spire** CBR ATM service levels can be decidated on an individualized basis. Our professional consultants work with you to design and implement the specific service levels you need to accommodate critical application transmission needs.

### Sample e.spire ATM Configuration

demarcation point.

Service Example Description: In this example, ATM provides an integrated transport service, using ATM PVCs, to connect sites from three geographically-dispersed locations. By supporting Token Ring and Ethernet LAN protocols, as well as legacy network connectivity, *e.spire* ATM provides the quality of service necessary for voice and video conferencing (delay-sensitive applications) as well as PC-to-PC and PC-to-remote server information transfer (less delay-sensitive).

Highlights	Benefits
Network Access:	Incrementally scalable high-speed transport for media-rich,
DS3 Port Access; access speeds from	data intensive, or delay-sensitive applications.
2Mbps to 45Mbps.	
Protocol Transparency:	LAN interconnectivity and integration with
Support for multiple technologies (TDM, Frame	legacy networks.
Relay, IP, Ethernet, Token ring, JPEG, MPEG-2) and applications.	
	Delivers appropriate quality-of-service for delay sensitive
Service Options:	applications, such as real-time video conferencing, and
Variable Bit Rate (VBR) and Constant Bit Rate	data sensitive applications, such as file transfers.
(CBR) quality of service options.	
Network Monitoring:	Ensures continual service integrity.
24 by 7 monitoring to the service	

For more information on *e.spire ATM*, or any of our other voice, data or Internet services, contact *e.spire* at 1-888-6espire.

### data - frame relay

Our internetworking of large parametes expire Frame Relay to frame relay networks of other key providers via NNIs (New 200 k to- Vetwork and parameters). Therefore, expire Frame Relay offers comprehensive solution in the transparently defended to the transparent d

And since **e.spire** Frame Relay scales to a riety of port connections and Committed Information Rate (CIR), you have the flee bility to implement point-to-point, star, or fully meshed networks with potentially significant savings over private eased-line networks.

### Service Levels

Our service is engineered for high-speed data transmission across **e.spire's** fully redundant ATM network, which is mon-tored 24 hours a day, 7 days a week, to the point of service demarcation. You benefit from continual service delivery because, in the event of network failure, we automatically reroute traffic.

With **e.spire** Frame Relay, you connect with the speed and service level that is right for your business, and right for your budget. When you subscribe to the level of service you need to meet normal and peak traffic loads, **e.spire** guarantees bandwidth availability and sustained throughput levels at the Committed Information Rate (CIR). And, when additional network capacity is available, your traffic "bursts" above the CIR, up to the maximum port speed, for even better performance.

### **Connectivity Options**

With our service, you need only one physical connection per site. This connection, or local loop, connects your customer premise equipment (CPE) such as a router, CSU/DSU, or FRAD, to the *e.spire* Frame Relay node. We establish multiple Permanent Virtual Circuits (PVCs) to provide additional logical connections between ports.

### frame relay

The physical connection of a Phosp independence promise aquicment (CPE) and the **e.spire** Frame-Relay node. Physical connection schedulars

56/64 kbps 1.54 Mbps

The port connection represents the max mum port speed on the *e.spire* Frame Relay switch. Port speeds are available at:

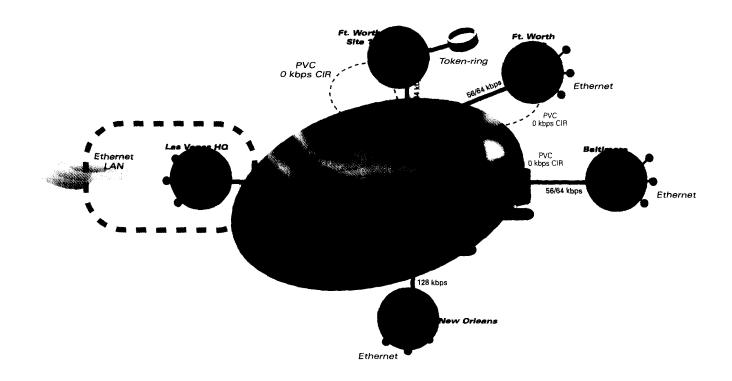

56/64 kbps	384 kbps	1024 kbps
128 kbps	512 kpps	1.54 Mbps
256 kbps	768 kbps	

The CIR is the guaranteed transmission capacity. Committed Information Rate (CIR) increments include:

0 kbps	128 kbps	512 kbps
32 kbps	256 kbps	768 kbps
56/64 kbps	384 kbps	1024 kbps

This diagram depicts a five-site frame relay network. The headquarters site, in Las Vegas, connects to the **e.spire** Frame Relay service at 1.54 Mbps. It is connected to New Orleans, Ft. Worth Site 1, and Baltimore via Permanent Virtual Circuits (PVCs). While the two Fort Worth sites must communicate with one another, only Fort Worth Site 1 needs to communicate with headquarters. Legacy Ethernet and Token Ring LANs are connected to headquarters utilizing existing customer premise equipment (CPE).

For more information on *e.spire* Frame Relay, or any of our other voice, data or Internet services, contact *e.spire* at 1-888-6espire.

### internet access

e.spire Internet Access service - we declare business customers, by providing a retuine

By taking advantage of our e.spire Internet global Internet. Once connected you a lonk. transfer, and you're inline with improved you -clusively to acorese network-based communications needs of ins of executing internet and intranet strategies.

ess services, you benefit from the speed and reach of the e.spire network, the unparalleled expertise of concretional engineers, and reliable and economical connectivity to the with internet technologies such as email, web access, and file usiness processes and efficiencies.

### Network

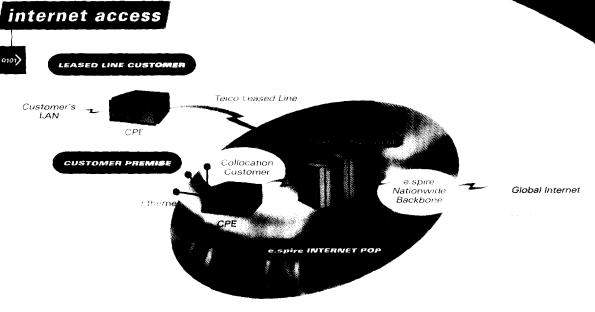

At e.spire, we've engineered one of the industry's most extensive high-speed Internets, with a T3 backbone reaching over 40 POPs, nationwide. Designed for maximum throughput, availability and reliability, it is a fullyredundant, meshed T3 network. Diversely recited backbone T3s are interconnected at the physical layer via sophisticated switching technology. The underlying transport medium is ATM, allowing for flexibility in both proactive capacity management, and dynamic re-routing in the event of a failure.

As a Tier 1 Internet Provider, we know that interconnections to the global Internet are an essential aspect of the engineering of our network. As such, we have established several public and private peering relationships to ensure robust connectivity to all Internet destinations. We currently exchange traffic with major Internet service providers at MAE-East, MAE-West, Chicago NAP and Sprint NAP.

### Access Services

e.spire offers access to the Internet through frame relay, dedicated lines or ATM, so you can take advantage of connectivity at the speed and price that's right for you. Access to the Internet is made available through both leased-line and collocation services.

Speed	Network Access	
64kbps	Frame Relay	
128kbps	Frame Relay	
256kbps	Frame Relay	
384kbps	Frame Relay	
512kbps	Frame Relay	
1.5Mbps (T1)	Frame Relay	
1.5Mbps (T1)	Dedicated	
4Mbps	ATM	
6Mbps	ATM	
10Mbps	ATM	
15Mbps	ATM	
45Mbps	ATM	

### Leased Line Service

Leased-line service is designed for customers requiring internet access to be extended to their location. You may opt for this service in order to provide Internet connectivity for your corporate network, or to provide access from the Internet to web or public servers which reside on your network.

### **Collocation Services**

Collocation services are for customers requiring the collocation of CPE in an **e.spire** POP facility. You may choose to collocate your web or enterprise servers, access-nodes (dial up Internet Access), or other specialized equipment. With this service, you benefit from your own dedicated equipment, while taking advantage of the redundancy, security, and power backups engineered into our fault-tolerant telco facilities. Collocation also provides an opportunity to avoid costly telco leased-line charges.

### Service Components

The following components are included with both leased-line and collocation service:

Installation Support — We will provide initial installation support to ensure the smooth implementation of your service. From ordering the telco circuit, to staging and deploying your CPE, and finally the turn up of your service, you'll have the support and expertise of **e.spire's** trained professionals.

Secondary Domain Name Service — Domain Name Servers are necessary to advertise your domain to the global Internet. A secondary DNS server acts as a backup to the primary DNS server the records are stored on. As part of your standard service, **e.spire** provides secondary DNS support.

IP Addresses — An IP address identifies a machine on the Internet. **e.spire** provides you with sufficient non-portable IP address space for the numbering of your network.

On-going Management — e.spire will provide 24 x 7 network management of your connection to the service demarcation point.

### Service Options

Primary Domain Name Service includes the administration and hosting of your domain's host records. Customers may choose to provide this service on their own, or outsource it to **e.spire**.

News is a means by which Internet users around the world can read and post comments on over 20,000 different topics.

e.spire Internet Access customers can choose to receive a full Usenet newsfeed to a server on their site.

Customer Premise Equipment (CPE) is the equipment necessary to terminate a dedicated Internet Access connection. For the convenience of our customers, **e.spire** offers both rental and purchase options for CPE.

For more information on *e.spire* Internet Access, or any of our other voice, data or Internet services, contact *e.spire* at 1-888-6espire.

### managed frame relay

At **e.spire**, we've engineered an extensive coast-to-chast Frame Relay network, interconnecting over 300 points of presence. The backbone is a fully-redundant, meshed 13 network, designed for maximum throughput, availability and reliability. This allows for flexibility in both proactive capacity management and dynamic rerouting in the event of a failure.

With e.spire Managed Frame Relay, bandwidth availability and sustained throughput are guaranteed. Since the services offer a variety of port speeds with multiple connections to sites within your network, they deliver the flexibility businesses need to implement or integrate point-to-point, star, or fully meshed networks.

Customize **e.spire** service with Frame Relay Select or take advantage of Frame Relay Premier for a complete "internetworking" solution. Features below highlight offerings for both levels of service.

Service Features	Service	c Levels
